BARRIERS | *Glass Screens*

Our premium barrier system, Glass Screens create permanent, effective enclosure and definition to your alfresco area.

We use 316 marine grade stainless steel and toughened safety glass for a durable system that lasts. Glass screens can also be up to 2.2m tall, providing effective shelter from wind and driven rain.

BARRIERS | GLASS SCREENS

Our glass screens come in three standard heights:

- 970mm
- 1600mm
- 2200mm

Bespoke heights are also available on request.

Glass screens are perfect for promoting a brand or establishment and, in many cases, are required to have some form of manifestation on them by local authorities.

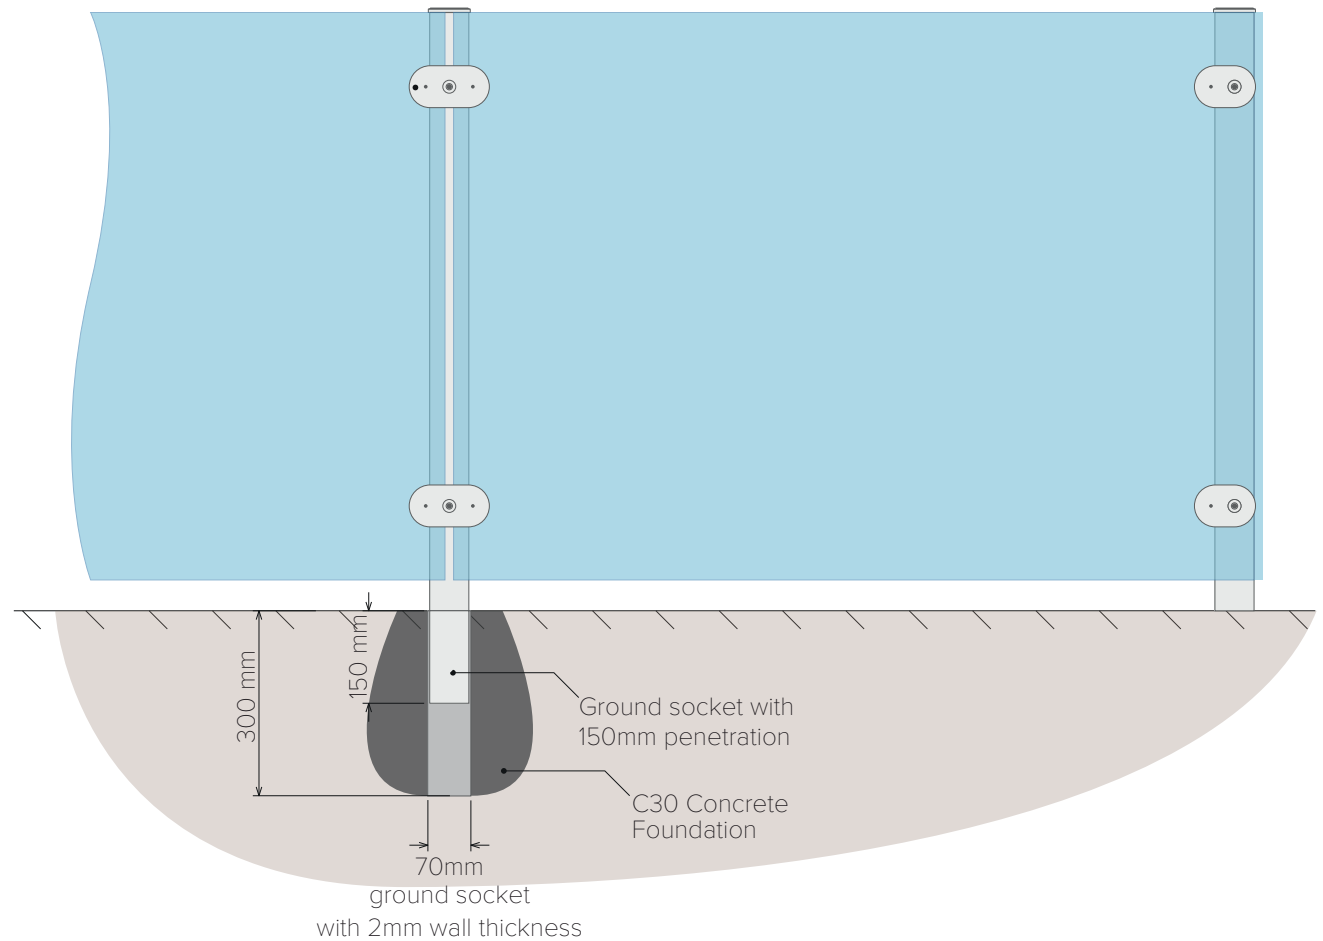

Vinyls are the most popular method of applying branding or a logo to glass screens, but the panels can also be tinted or engraved for a more permanent result.

Our glass screens utilise our SmartScreen posts, which are made from 316marine-grade stainless steel to ensure superior quality and durability.

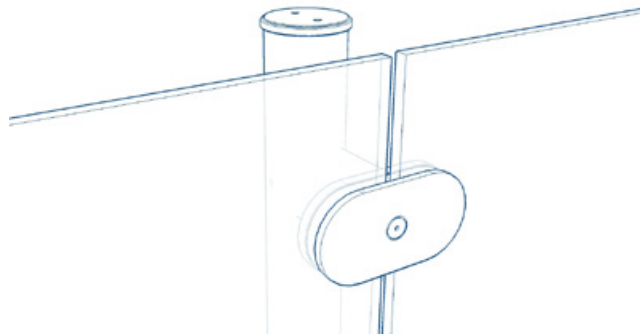

Posts are installed and fixed in ground sockets for a permanent and resilient barrier system.

As standard, we provide two styles of glass screen systems:

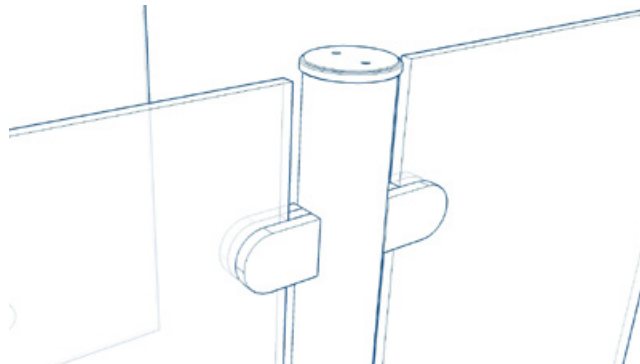

Cap Clamp

The Cap clamp system utilises bespoke spigots and clamps which stand the glass off from the posts and allow panels to be installed closer together for improved protection from wind.

D Clamp

The D clamp system holds the glass panels in line with the posts which helps maximise space.

Our Glass Screens are built to order - and as such can be customised to suit your needs.

We can add menu boards, unique panels shapes or add lighting to posts.

If you have an idea, why not give us a call and see if we can help?
